New Griswold™ Corporate Brochure Now Available

Updated brochure highlights commitment to quality-engineered products

Grand Terrace, CA – May 2, 2011 — Griswold™ Pump Company, a leading manufacturer of centrifugal pumps, has a long standing tradition of providing pumps that stand for quality and value, as well as placing a strong emphasis on meeting the delivery requirements of its customers. In the new version of its Corporate Brochure, Griswold also offers its customers a look into its state-of-the-art certified testing facility where it designs, engineers and manufactures a variety of centrifugal pumps, including ANSI, end suction, self-priming and vertical turbines.

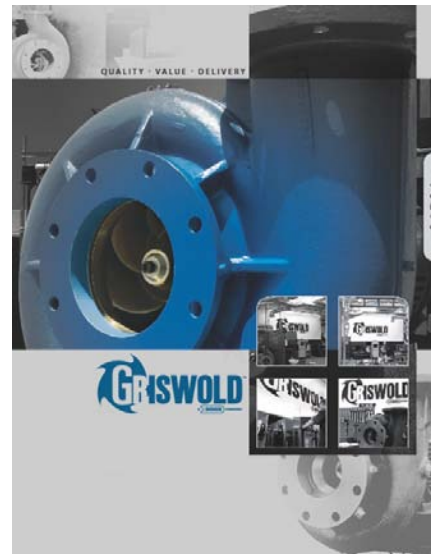

The updated brochure includes information about Griswold's facility, which is both ISO 9001 and ISO 14000 certified. Its facility includes a clean room for power frame assembly, CNC production equipment and computer-aided balancing equipment. Most importantly, Griswold has the factory personnel who are dedicated to providing quality pumps, some of whom have more than 20 years experience in Griswold manufacturing.

The brochure also spells out Griswold's commitment to delivering superior products through a dedicated engineering department whose focus is new product development and application support. Griswold's quality department also ensures that all of its pumps and parts are manufactured with only the highest quality materials. By maintaining a substantial stock of its most common materials, including ductile iron, stainless steel, CD4 and alloy 20, Griswold can almost guarantee that it is able to meet the delivery demands of every one of its customers.

In addition, the brochure highlights the Griswold E,F&G Series and 811 Series ANSI/ASME Centrifugal Pumps, which are both ideal in a number of applications within the oil & gas, chemical process, industrial and municipal water/wastewater markets.

For more information on the Griswold™ Pump Company please visit www.griswoldpump.com. Griswold is an operating company within Pump Solutions Group (PSG™). For more on PSG, go to www.pumpspsg.com.

Griswold™ Pump Company is a full-line pump manufacturer with product lines dating back more than 70 years. Included among its industry-leading pump lines are ANSI, end-suction centrifugal pumps, self-priming pumps and submersible/vertical turbines. These pump styles allow Griswold to serve a broad range of chemical process, industrial and municipal applications. Griswold Pump Company—headquartered in Grand Terrace, California, USA—is a member of Dover Corporation's Pump Solutions Group (PSG™).
