Mouvex[®] and Hydrocar Launch MH6 Dry-Bulk Unloading Solution *MH6 Is The World's First All-In-One Screw Compressor/PTO Unit, Debuts at IAA*

Auxerre, France & Modena, Italy – September 23, 2010 — Mouvex[®] and Hydrocar are both proud to announce the availability of the innovative new MH6, a truly unique solution for dry-bulk unloading that is a combination screw compressor/Power Take-Off (PTO) unit for trucks. The MH6—which is the first of what will be a complete line of MH screw compressors for use in cement transport—is the result of a partnership between Mouvex, Auxerre, France, and Hydrocar, Modena, Italy. The MH6 is being launched at the 63rd Annual International Motor Show (IAA) Commercial Vehicles in Hannover, Germany.

The genesis for this unique partnership between Mouvex and Hydrocar was the European Union's Euro 6 legislation, which was introduced in June 2007. Euro 6 put stricter limits on tailpipe, evaporative and crankcase emissions from passenger vehicles, vans and commercial vehicles intended for the transport of passengers or goods, or certain other specific uses. In effect, Euro 6 mandated that truck manufacturers would need to begin producing vehicles that were lighter and used less petrol.

Recognizing an opportunity, Mouvex and Hydrocar formed a partnership that addresses the new needs of truck manufacturers. This partnership resulted with the combination of a Mouvex screw compressor with a Hydrocar PTO, which could then be attached directly to a truck's gearbox—and the MH6 was born.

The MH6 has been designed to offer many benefits to the end-user in dry-bulk transport applications, such as cement, fly ash, building material, lime, flour, etc. Among the benefits are up to a 70% weight reduction when compared to existing equipment; the absence of free-turning drive parts, which increases safety; no additional installation space required; no concerns with cardan-joint lengths or angles; no need for separate oil changes since the system is integrated into the truck's gearbox; and compatibility with a wide variety of truck configurations, from 4x2 short wheelbase to 6x2 and 6x4 designs. Mouvex also plans to offer a three-year warranty on the MH6.

Since the MH6 is a lighter system, it can result in an overall weight reduction of 150 to 200 kg (331 to 441 lbs.) in relation to standard existing systems. Thanks to the lighter overall weight of the system, the MH6 is able to provide fleets with increased turnover per truck per year that equates to improved revenues.

For more information on the new MH6 Screw Compressor/PTO, please visit Mouvex at Hall 25 C33, or Hydrocar at Hall 26 E40 during the 63rd Annual International Motor Show (IAA). You can also visit www.mouvex.com or www.hydrocar.com.

Mouvex[®] was incorporated in 1906 and is a leading manufacturer of positive displacement pumps and compressors for the transfer of liquids or dry bulk products worldwide. Through a global network of distributors and original equipment manufacturers, Mouvex serves the following markets: refined fuels, oilfield, energy, food /sanitary, military, transport and chemical process. Mouvex—headquartered in Auxerre, France—is a member of Dover Corporation's Pump Solutions Group (PSG[™]).

Hydrocar a member of Interpump Hydraulics SpA is headquartered in Nonantola (MO), Italy, with a very precise purpose: offer new power take-off mechanisms and devices to a variety of hydraulic systems for industrial vehicles. The hundreds of models created over the years and the many configurations applied to its components allow Hydrocar to confidently state that this objective has been positively fulfilled. The constantly increasing number of trucks around the world equipped with Hydrocar PTOs and pumps offers the greatest satisfaction for so many years of hard work and commitment.
