Wilden® Pump & Engineering Receives Patent For Pro-Flo X™ Air Distribution System

Grand Terrace, CA – October 29, 2010 — Wilden®, the worldwide leader in air-operated double-diaphragm (AODD) pump technology, is proud to announce that its revolutionary Pro-Flo X™ Air Distribution System (ADS) has received Patent No. 7,811,067 from the United States Patent and Trademark Office.

“For more than 50 years, Wilden has been setting the standard in air-operated double-diaphragm pump technology and the invention of the Pro-Flo X™ ADS has only enhanced the performance of our AODD pumps,” said Denny Buskirk, Managing Director of Wilden Pump & Engineering. “The awarding of this patent to the Pro-Flo X™ technology just reaffirms our commitment to the industries that rely on AODD pumps to maximize their business operations.”

The Pro-Flo X™ ADS has been designed to offer operational flexibility in many diverse applications. This flexibility is achieved through the presence of the state-of-the-art Efficiency Management System (EMS™), which optimizes the Pro-Flo X™ for the actual operational parameters, regardless of the application demands or pump size. The EMS™ allows the operator to use an integrated control dial to select the efficiency point and flow rate that best suits the application. The Pro-Flo X™ with EMS™ provides operators with the most efficient AODD pump solutions available. The results, in addition to lower energy costs, are higher performance, lower operational costs and performance flexibility that goes beyond what is considered the industry standard.

Jim Wilden, founder of Wilden Pump and Engineering Co., revolutionized the pumping industry when he invented the air-operated double-diaphragm pump in 1955. Since then, Wilden has created a line of distinctive pumps that have proven to be trustworthy solutions to pumping applications in a wide variety of industries. Wilden—headquartered in Grand Terrace, California, USA—is a member of Dover Corporation's Pump Solutions Group (PSG™).
