

FK/FS DRUM PUMP KIT FOR THE ALMATEC® CXM SERIES

The Almatec® FK/FS Drum Pump Kit, equipped with a proven CXM Series AODD Pump, offers a trouble-free and straightforward solution for emptying your drums.

This kit is an ideal addition to the CXM Series product portfolio, as these pumps have always been particularly suitable for use as drum pumps due to their characteristic properties:

- Flexible use for a wide range of media
- Practical connections with input on the underside
- Lightweight and convenient dimensions
- High capacity in relation to size
- Self-priming and dry-run capable
- Intrinsic safety

Almatec offers this drum pump kit in two versions for CXM20 and CXM50 sizes: one with a PE suction pipe to match the pump material and the other with a stainless-steel suction pipe.

The drum pump kit is available as an add-on when ordering new pumps or can be retrofitted to existing pumps.

This Almatec drum pump kit is specifically designed for drums with a 2" bunghole. The kit comes with a 900 mm long suction pipe, a guidance piece equipped with drum ventilation, raised shock absorbers that ensure the pump is safely and securely placed above the bunghole, and a needle valve that makes it easy to regulate the pump. Additionally, if you order the kit with a new pump, you will also receive a practical carrying handle for added convenience.

Now Available in ATEX

Our steel pipe version now has ATEX certification*. This ensures safe and easy handling of explosive media with self-priming and dry-running features.

Interested? We look forward to hearing from you and will be happy to assist you.

* only if purchased together with the pump
