

Installation, Operation and Maintenance Instructions for

EBSRAY Model V35 type 28

Rotary Sliding Vane Pump

NOTE:

This EBSRAY V35 type 28 pump is of identical construction to the type 23 & 24 and 27 as described in the attached brochure with the exception of the materials and the replacement of the internal bypass valve with a Pressure and Flow Modulating valve (PFM). All procedures and clearances are the same. The PFM valve is covered in a separate manual (attached) It is important to note that when ordering replacement parts, the pump's serial number must be quoted to ensure correct replacement of parts to original specification.
