

MPS-450 Series

High-Purity PFA Pressure Transducer

The Malema MPS-450 Series Pressure Sensor is engineered to ensure safe, reliable, and efficient flow control for high-purity applications in the semiconductor industry. The internal flow path is designed to minimize holdup volume, while wetted components of these nonmetallic sensors are constructed using PTFE, PFA, or other similar high-purity inert materials.

Key Features

- Comprehensive Solution: Economical and accurate fluid pressure sensing
- High-Purity Materials: Wetted materials made from PFA and FFKM to help ensure compatibility with high-purity applications
- Temperature Range: Suitable for single-phase fluids from 0°C to 70°C
- Design Flexibility: Available in both single port and flow-through designs

Applications

- Wet Etch
- Wet Clean
- CMP
- ECD
- Electroless Deposition
- Wet Process / Chemical Distribution Systems
- Chemical Blend Systems
- Ultra-Pure Water

Current Output Load Resistance

Recommended load resistance for 4-20 mA loop is 250 ohm. If higher load is to be used, the max load resistance and power supply voltage needed can be calculated using the following formula.

Load Resistance (ohm) = (Vcc- 12)/0.03

Vcc = Power Voltage in volts
