Pro-Flo® Series
simple.reliable.efficient.

Where Innovation Flows
As the industry’s workhorse, the Wilden Pro-Flo® Series combines elegant simplicity with robust and reliable performance that end users have come to depend on for more than 20 years. Ideally suited for industrial applications calling for a durable chemical pump or oil pump, Pro-Flo Series pumps offer increased productivity with more flow while reducing air consumption and maintenance. The Pro-Flo Series gives you extreme flexibility and reliability – with a wide range of sizes and material offerings – that end users can count on to deliver the consistent performance promised for challenging applications.
The secret to the success of Pro-Flo Series pumps is the incorporation of a simple and durable Air Distribution System (ADS) that features a plastic center block and lube-free operation. The patented Pro-Flo ADS incorporates three moving parts: the unbalanced air valve spool, the pilot spool and the main shaft/diaphragm assembly for simplicity and high reliability.
Working Principle of Wilden AODD Pumps

Wilden AODD pumps are reciprocating, positive-displacement-style pumps driven by compressed air. The following drawings and information detail the liquid flow pattern through the pump from its initial unprimed position.

1. The air valve directs pressurized air to the back side of Diaphragm A.
2. The compressed air moves the diaphragm away from the center of the pump.
3. Diaphragm B is pulled in by the shaft connected to the pressurized Diaphragm A.
4. Diaphragm B is now on its suction stroke. The movement of Diaphragm B toward the center of the pump creates a vacuum within chamber B and causes the atmospheric pressure to force fluid into the inlet manifold forcing the inlet valve ball off its seat.
5. When the pressurized diaphragm, Diaphragm A, reaches the limit of its discharge stroke, the air valve redirects pressurized air to the back side of Diaphragm B.
6. The pressurized air forces diaphragm B away from the center while pulling Diaphragm A to the center.
7. Diaphragm B is now on its discharge stroke. Diaphragm B forces the inlet valve ball onto its seat due to the hydraulic forces.
8. The hydraulic forces lift the discharge valve ball off its seat, while the opposite discharge valve ball is forced onto its seat, forcing fluid to flow through the pump discharge.
9. At completion of the stroke, the air valve redirects air to the back side of diaphragm A, which starts diaphragm B on its exhaust stroke.
10. As the pump reaches its original starting point, each diaphragm has gone through one exhaust and one discharge stroke. This constitutes one complete pumping cycle. The pump may take several cycles to completely prime depending on the conditions of the application.

Benefits of AODD Pumps

Thanks to their unique operating principle, AODD pumps excel in a wide variety of applications and incorporate numerous features and benefits, including:

- Self priming
- Portable
- High vacuum
- Lube-free operation
- No mechanical seals - reduces risk of leaks
- Run-dry capable
- No heat generation
- Submersible
- Superior product containment
- Easy installation
- Corrosion resistant
- Longest Mean Time Between Failure (MTBF)
- Anti-freezing
How AODD Compares to Other Pump Technologies

Air-operated double-diaphragm pumps provide a lot of unique benefits to all types of applications and markets.

Pro-Flo® Applications

Serving the energy, process, hygienic, mining and water and wastewater markets, Wilden’s world-class distributor network ensures that you will have access to the latest pump technologies and fluid transfer services available when you need them. To find a distributor closest to you, visit wildendistributor.com.
Wilden Bolted Metal & Plastic Pumps

Wilden bolted metal and plastics pumps are specifically engineered for maximum performance and operational excellence in a variety of applications. Their bolted configuration ensures total product containment while the optimized liquid path reduces internal friction to maximize output and efficiency. Bolted pumps are designed to be a drop-in/fit replacement for current systems.

SIZE AND MATERIAL OPTIONS:

- Sizes: 6 mm (1/4") through 76 mm (3")
- Wetted Path Materials:
  - Metal: Aluminum, Ductile Iron, Stainless Steel, Alloy C
  - Plastic: Polypropylene, PVDF
Pro-Flo® Series Connection Types

Plastic or Metal? – Plastic and metal pumps each have unique benefits and characteristics suited for your specific application needs. For chemical processes, plastic pumps typically provide greater resistance than metal. Hygienic processes on the other hand tend to require stainless steel. Additionally, general industrial applications benefit from aluminum and ductile iron’s durable properties. Wilden has multiple material options to provide the exact pump needed for your application.

Clamped or Bolted? – The original AODD pump design, clamped pumps, lend themselves to various process and waste applications, as well as construction and mining. The clamped configuration provides easier maintenance without sacrificing reliability. Bolted pumps deliver maximum process fluid containment over clamp-banded designs, and can be used for a wide range of applications, including oil and gas, paints and inks, and acids. Bolted pumps also offer a redesigned liquid path that reduces internal friction to maximize output and efficiency.

Wilden Clamped Metal & Plastic Pumps

For applications where constant changeovers between products are required, Wilden clamped metal and plastic pumps provide ease of maintenance. The clamp bands come off quickly and easily for replacement of diaphragms and cleaning. The lower downtime translates directly into your increased productivity and contributes to your profitability.

SIZE AND MATERIAL OPTIONS:
• Sizes: 6 mm (1/4”) through 51 mm (2”)
• Wetted Path Materials:
  • Metal: Aluminum, Ductile Iron, Stainless Steel
  • Plastic: Polypropylene, PVDF

Which Pump Is Right For Me?

Plastic or Metal? – Plastic and metal pumps each have unique benefits and characteristics suited for your specific application needs. For chemical processes, plastic pumps typically provide greater resistance than metal. Hygienic processes on the other hand tend to require stainless steel. Additionally, general industrial applications benefit from aluminum and ductile iron’s durable properties. Wilden has multiple material options to provide the exact pump needed for your application.

Clamped or Bolted? – The original AODD pump design, clamped pumps, lend themselves to various process and waste applications, as well as construction and mining. The clamped configuration provides easier maintenance without sacrificing reliability. Bolted pumps deliver maximum process fluid containment over clamp-banded designs, and can be used for a wide range of applications, including oil and gas, paints and inks, and acids. Bolted pumps also offer a redesigned liquid path that reduces internal friction to maximize output and efficiency.
Integral Piston Diaphragms (IPDs)

Wilden IPDs offer safe, clean and reliable product transfer with no product entrapment areas to minimize product contamination and risk liabilities. These diaphragms have a smooth, contoured shape and no outer piston. IPDs have greater durability and flex life and are compatible with existing shafts and supporting hardware. They also provide greater flow rates and faster installation.

CHEM-FUSE INTEGRAL PISTON DIAPHRAGM

Chem-Fuse diaphragms are the ideal solution for general industrial and chemical applications. Incorporating the core patented technology of Wilden’s integral piston design, Chem-Fuse diaphragms solve many of the critical issues faced by industrial companies that use conventional diaphragms without sacrificing performance. This diaphragm features a wide range of temperature limits, excellent flex life, high abrasion resistance and outstanding durability, even when handling acids, caustics and other aggressive fluids. Additional benefits include:

• Up to 100% increased flow and suction lift compared to PTFE laminate diaphragms
• Elimination of potential leak point increases containment and safety when pumping critical or dangerous fluids
• Available in: Wil-Flex™ material
• Available sizes: 25 mm (1”), 38 mm (1-1/2”), 51 mm (2”), 76 mm (3”)

STANDARD DIAPHRAGM

GOOD

TRAP AND ABRASION AREA:
Product trap area between outer piston and diaphragm where normal abrasive wear can occur creating a potential leak point especially when pumping abrasive products

CHEM-FUSE DIAPHRAGM

BEST

ONE PIECE DESIGN:
Eliminates product trap areas between the outer piston and diaphragm

INTEGRAL PISTON AND FULL-STROKE SHAFT:
Provides greater efficiency and allows the pump to achieve twice the suction lift and flow when compared to other diaphragms

Easy to clean for fast product changeovers
In addition, Wilden also offers a variety of other diaphragm options, including:

**EZ-INSTALL**
- Convolute shape allows quick, easy installation and minimizes risk of injury
- Decreased downtime and costs of diaphragm replacement
- Available in: Thermoplastic Elastomers (TPE) Wil-Flex, Sanilflex™, Polyurethane and Geolast®
- 100% compatible with existing hardware

**PTFE ELASTOMERS**
- Optimal choice for aggressive chemical applications
- Excellent flex life, good abrasion resistance and durability
- Available in Reduced-Stroke PTFE and Full-Stroke PTFE

**RUBBER ELASTOMERS**
- General purpose diaphragm
- Provides the greatest temperature spans
- Increased chemical resistance
- Available in Buna-N, EPDM, Neoprene, and FKM

**ULTRA-FLEX™**
- Utilizes longest-lasting rubber-compound diaphragm in the industry
- Reduces internal stress for long diaphragm life
- Increased abrasion resistance with corrosive materials

**Accessories**
Wilden’s accessory products add value to your liquid process and expand the application range of Wilden pumps by augmenting the performance and/or utility of the pump.

- **SD Equalizer** - designed to minimize pressure variation on the discharge end of the pump, allowing for a consistent laminar/streamline flow
- **Wil-Gard™** - detects and notifies plant personnel when a diaphragm has ruptured to prevent further damage to pump
- **Pump Cycle Monitor (PCMI)** - counts pump cycles by sensing the presence of the air valve spool
- **Drum Pump Kit** - enables Wilden 6 mm (1/4”) and 13 mm (1/2”) pumps to adapt directly to drums for cost-effective, efficient liquid transfer

**Repair and Retrofit Kits**
Wilden wet and air repair kits for AODD pumps have been designed to help properly maintain the health and performance of your Wilden pump.

Always use only authentic Wilden air kits and wet kits when repairing or maintaining your Wilden products to preserve optimal performance and factory warranties.

- Easily order online at your convenience
- Kits are maintained and shipped in sealed packaging
- Include all necessary components for repair and maintenance

Wilden also offers retrofit kits which allow you to upgrade your existing pumps. Other spare parts outside of the traditional repair kits are available upon request.
25 mm (1”) PRO-FLO BOLTED METAL PUMP

Air Inlet: 1/4” FNPT
Liquid Inlet: 25 mm (1”)
Liquid Discharge: 25 mm (1”)
Connection Type:
NPT/BSPT (Threaded)
DIN/ANSI (Flanged)

Max. Flow Rate: 212 lpm (56 gpm)
Max. Inlet Pressure: 8.6 Bar (125 psig)
Max. Size Solids: 6.4 mm (1/4”)
Max. Suction Lift:
5.5 m Dry (18.2’)
9.3 m Wet (30.6’)

Shipping Weight:
Aluminum 11 kg (24 lb)
Ductile Iron 21 kg (47 lb)
316 Stainless Steel 23 kg (51 lb)

Dimensions

38 mm (1-1/2”) PRO-FLO BOLTED METAL PUMP
DESIGNATION: THREADED (P420/A, P420/S, P420/W), FLANGED (P430/A, P430/S, P430/W)

Air Inlet: 1/2” FNPT
Liquid Inlet: 38 mm (1-1/2”)
Liquid Discharge: 38 mm (1-1/2”)
Connection Type:
NPT/BSPT (Threaded)
DIN/ANSI (Flanged)

Max. Flow Rate: 492 lpm (130 gpm)
Max. Inlet Pressure: 8.6 bar (125 psig)
Max. Size Solids: 6.4 mm (1/4”)
Max. Suction Lift:
5.5 m Dry (18.2’)
9.0 m Wet (29.5’)

Shipping Weight:
420 Threaded AL 26 kg (57 lb)
430 Flanged AL 28 kg (62 lb)
420 Threaded SS 50 kg (111 lb)
430 Flanged SS 53 kg (116 lb)

- **Max. Flow Rate:** 140 lpm (37 gpm)  
- **Max. Inlet Pressure:** 8.6 bar (125 psig)  
- **Max. Size Solids:** 3.2 mm (1/8")  
- **Max. Suction Lift:** 5.5 m Dry (18.0')  
- **Shipping Weight:** Polypropylene 8 kg (18 lb)  
- **Shipping Weight:** PVDF 10 kg (23 lb)

**Dimensions**

- **277 mm (10.9") AIR INLET**  
- **249 mm (9.8")**  
- **76 mm (3.0")**  
- **292 mm (11.5") AIR EXHAUST**

**Flow Curve**

For additional information, please refer to the P2 Plastic EOM.

---

**38 mm (1-1/2") PRO-FLO CLAMPED PLASTIC PUMP**  

- **Air Inlet:** 1/2" FNPT  
- **Liquid Inlet:** 38 mm (1-1/2")  
- **Liquid Discharge:** 38 mm (1-1/2")  
- **Connection Type:** DIN/ANSI (Flanged)  
- **Max. Flow Rate:** 354 lpm (94 gpm)  
- **Max. Inlet Pressure:** 8.6 bar (125 psig)  
- **Max. Size Solids:** 4.8 mm (3/16")  
- **Max. Suction Lift:** 4.88 m Dry (16.0')  
- **Shipping Weight:** Polypropylene 16.8 kg (37 lb)  
- **Shipping Weight:** PVDF 21.3 kg (47 lb)

**Dimensions**

- **485 mm (18.3") AIR INLET**  
- **79 mm (3.1")**  
- **300 mm (11.8") AIR EXHAUST**

**Flow Curve**

Air Inlet: 1/2” FNPT
Liquid Inlet: 51 mm (2”)
Liquid Discharge: 51 mm (2”)
Connection Type: DIN/ANSI (Flanged)

Max. Flow Rate: 591 lpm (156 gpm)
Max. Inlet Pressure: 8.6 bar (125 psig)
Max. Size Solids: 6.4 mm (1/4”)

Max. Suction Lift: 7.4 m Dry (24.4’)
8.6 m Wet (28.4’)

Shipping Weight:
Polypropylene 34 kg (75 lb)
PVDF 43 kg (95 lb)
