

Wilden® Releases V150 13 mm (1/2") Velocity Series Pump

Unique, versatile design with multiple mounting orientations and various inlet and discharge options

Grand Terrace, CA – Nov. 15, 2018 — Wilden®, part of PSG®, a Dover company and a worldwide leader in air-operated double-diaphragm (AODD) pump technology, has extended its line of specialty AODD pumps with the addition of the new V150 13 mm (1/2") Velocity Series pump. Featuring a unique detachable mounting foot, Velocity Series pumps can easily be reoriented into a vertical or horizontal position with multiple inlet and discharge port options. With this innovative and versatile design, the pump can be installed in multiple orientations, a critical consideration for systems and skids.

The Velocity Series – available in 13 mm (1/2") and 6 mm (1/4") sizes – features a bore-seal design that eliminates leaks that can result from torque decay. It also delivers improved dry suction lift up to 4.3 m (14.2') in the 6 mm (1/4") size and 5.1 m (16.9') in the 13 mm (1/2") size better priming. In addition, Wilden Velocity Series pumps incorporate a proven and simple air distribution system (ADS) with only two moving parts that reduces the risk of downtime for long-term reliability.

Velocity Series pumps are available in polypropylene and PVDF construction, as well as an Accu-Flo™ (solenoid) option, with elastomer options that include PTFE and Wil-Flex™. Velocity Series pumps feature an interchangeable footprint with previous Wilden designs (P.025, P25, P1 and P100) for user convenience.

About Wilden Pump and Engineering:

Jim Wilden revolutionized the pumping industry when he invented the air-operated double-diaphragm (AODD) pump in 1955. Since then, Wilden AODD pumps have proven to be trustworthy solutions to pumping applications in a wide variety of industries. Wilden pumps are part of PSG®, a Dover company, and manufactured in Grand Terrace, CA.
